

Riverside of Gaia

SUSTAINABILITY

It is the principle of meeting present generation needs, without compromising the future generations'.

CREATION OF THE RIVERSIDE OF GAIA

- In May 2003, the first ETAR was created;
- Before 2003, the rivers were very polluted, which was dangerous to the nature;
- After the creation of the first ETAR, many others ETAR's were being created to help cleaning the rivers;
- Right now, the rivers aren't totally cleaned up, so we need to continue helping to depollute the riverside of Gaia and keep building more ETAR's.

THE BENEFITS OF SUSTAINABILITY:

- Rivers provide ecological benefits that are essential for life;
- They provide water for drinking, and for industrial purposes, they also support diverse habitats and ecosystems.

GOOD SUSTAINABILITY PRACTICE

*Reduce, recycle, reuse, refuse and rethink

CREATORS AND LOCATION

- Anna Vaz, Matilde Carvalho, Cecília Oliveira, Sara Barros and Mafalda Tavares
- Vila Nova de Gaia, Porto, Portugal
